

Marine Repair Coordination

Continued support to the customer during a Marine Repair

ASN's experts work with customer's NOC and/or O&M staff to reduce repair time and restore traffic by co-ordinating between technical experts, Marine Maintenance Authority & Customers' staff

OTDR traces analysis	Management of BU switching	Network power reconfiguration	Dispersion management prior to and during the repair	Splice validation
ASN team to draft an operation plan for approval by customer	Synchronization of activities during repair operations	Collection of information and provision of reports	Final Reporting following the activities	Preparation for shipment of equipment back to ASN factory for analysis, if required

Marine Repair Coordination

CUSTOMER BENEFITS

ASN provide continuous support from the time a wet plant fault has been identified

NOC personnel build a trusted relationship with ASN during complex operations

ASN working with the NOC helps to minimise the repair time and therefore bring the system back into service quicker
